

Muhammad Sholehhudin

Frontend-Focused Fullstack Engineer · Building scalable SaaS & Real-Time Systems

msholehhudin.ms@gmail.com | github.com/msholehhudin | linkedin.com/in/muhammad-sholehhudin | Jakarta, Indonesia — Open to Remote & Relocation

PROFESSIONAL SUMMARY

Frontend-Focused Fullstack Engineer specializing in React.js, Next.js, Node.js and Laravel with 3+ years of experience delivering production-grade web applications, backed by 7 years of experience across IT solution industries, healthcare and media industries.

Proven track record of building real-time systems, scalable dashboards, and customer-facing platforms used in live business operations. Experienced in SSR/SSG optimization, modern state management (TanStack Query, Redux), and performance-driven UI development.

Currently focused on building high-impact products including a healthcare delivery SaaS (mediXpress) and a vehicle inspection CRM platform used by real clients.

Open to remote opportunities in global teams.

TECHNICAL SKILLS

Core Frontend	React.js, Next.js, Vue.js 3, TypeScript, JavaScript ES6+
Styling & UI	Tailwind CSS, Framer Motion, Bootstrap 5
State Management	TanStack Query, Redux, Pinia
Backend (Supporting)	Laravel, Express.js, Supabase
Real-Time	WebRTC, Firebase
Database	MySQL, PostgreSQL

PROFESSIONAL EXPERIENCE

Fullstack Engineer

2023 – Present

PT. Asia Outsourcing Services — Jakarta, Indonesia

- Built and maintained **3+ client-facing fullstack web applications** used by businesses clients, improving operational workflows and reducing manual processes
- Developed **Bluespider Contact Center** handling real-time communication (WebRTC, Firebase), supporting multi-channel interactions (WhatsApp, email) for customer service teams
- Improved frontend scalability by implementing modular component architecture (Vue 3 + Pinia), reducing development time for new features
- Managed deployment pipelines using Docker Compose and SSH-based Linux server environments
- Continuously improved React.js and Next.js expertise through freelance and SaaS projects alongside professional role

IT Engineer & Internal Developer

2021 – 2023

PT. Duta Visual Nusantara Tivi Tujuh (TRANS7) — Jakarta, Indonesia

- Developed **internal desktop applications** using C# and MySQL to support operational needs of the On Air division at a national TV broadcasting network
- Maintained server infrastructure and IT systems supporting **live broadcasting operations**, ensuring high uptime in a time-critical environment
- Handled hardware, software, and network troubleshooting across on-air broadcast environments

IT Support & Graphic Designer

2019 – 2021

RS Mitra Sehat Medika — Pandaan, Indonesia

- Managed IT systems and technical support for hospital operations, ensuring reliability of critical healthcare infrastructure
- Produced digital design assets and visual materials; developed foundational knowledge of healthcare workflows — directly informing later SaaS development in the same domain

SELECTED PROJECTS

Joy Inspec — Vehicle Inspection CRM Platform

React.js, Next.js, Tailwind CSS · Freelance, In Production

- Developed a production-ready CRM system for a vehicle inspection business operating across Jabodetabek
- Built responsive landing page and internal dashboard used for managing inspection workflows and reporting
- Collaborated with backend engineer to deliver real client requirements from concept to deployment
- Deployed on Vercel (for demo) with modern frontend architecture and optimized performance

mediXpress — Pharmacy Delivery Platform

Next.js, React, Supabase, Tailwind CSS · SaaS / Solo Project

- Designed and developed a fullstack platform enabling hospital patients to order and receive medication without queueing
- Solves real-world problem in hospital pharmacy workflows by introducing delivery-based service model
- Implemented SSR and performance optimization using Next.js, with Supabase handling authentication and real-time data
- Currently in validation and pitching stage with healthcare stakeholders
- Focused on improving operational efficiency and reducing patient waiting time through digital workflow optimization

Bluespider Contact Center

Vue.js, Laravel, Firebase, WebRTC, Docker, Inertia.js

- Developed frontend and backend features for a web-based omnichannel contact center system, covering multi-channel communication (WhatsApp, email), ticketing, live agent monitoring and reporting
- Implemented real-time communication (WebRTC) and live presence/messaging via Firebase

EDUCATION

Bachelor's Degree in Informatics Engineering

Universitas Brawijaya, Malang · Graduated 2018

PROFESSIONAL DEVELOPMENT

2026	Microsoft Certified: Data Science & Generative AI Developer Path. — Dicoding Academy
2025	AI & Machine Learning Fundamentals — Dicoding Academy
2023	Frontend Development: React.js — Alterra Academy Indonesia
2022–2023	Full-Stack Web Development — Dicoding Academy (incl. AWS Cloud Practitioner)
2021	Backend Development: PHP & Laravel — Sanbercode

WORK PREFERENCES

- ✓ Open to fully remote roles and international teams
- ✓ Comfortable working and communicating in English
- ✓ Willing to relocate if required
- ✓ Available for async collaboration across time zones
